

STATIONS AND DISTRIBUTION

Having built the first retail hydrogen station network in Canada, HTEC is continuously expanding the infrastructure to make Hydrogen one of the most accessible and convenient clean fuel options, enabling the deployment and widespread adoption of hydrogen-electric transportation.

HTEC designs, builds, owns, and operates hydrogen stations and distribution systems in strategic North American regions.

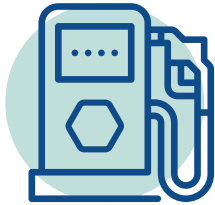

Hydrogen Distribution

HTEC's PowerCube distribution system is a 450-bar modular hydrogen storage product—approved by Transport Canada and the US Department of Transportation—that can be used for distribution, ground storage, or as part of a mobile fueling system.

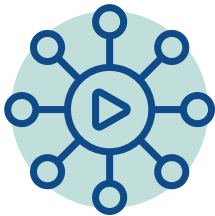

Network/Station Operation

HTEC operates each station it owns and co-owns across North America. It also operates stations owned by third-party companies providing preventative maintenance, hydrogen supply, network monitoring & service, customer support and continuous improvement.

Hydrogen Station Development

BC Hydrogen Fueling Station Network

HTEC opened Canada's first retail hydrogen fueling station in June 2018 to launch a multi-station network supporting the first commercial hydrogen electric vehicles rolling onto BC roads. As of October 2022, HTEC owns five stations in BC – three in the lower mainland, one on Vancouver Island and one in Kelowna.

Quebec Retail Network

HTEC designed and operates a containerized station in Quebec and plans to open more hydrogen stations in the province in the near future.

California Retail Station

HTEC also owns a station in Woodside, California. The station is expected to open soon.

Network Expansion

HTEC currently has several stations in various stages of planning and development throughout Canada. The company is also building higher capacity fueling stations to serve medium- and heavy-duty transportation.

HTEC: Fueling the Drive to Hydrogen

HTEC works across the clean hydrogen value chain, providing hydrogen energy solutions to enable the transportation sector's transition to a low carbon future. The company designs, builds, owns and operates hydrogen fuel production, infrastructure and

supply solutions to support the deployment of hydrogen electric light-, medium- and heavy-duty transportation.
